

YOUR WHOLE VAN, ON **EVERY** SCREEN

One small hub reads the leisure battery, the chargers and the heater, switches six circuits, and knows where the van is and whether it is level. See it all on a 4-inch touch display, on your iPhone or Android phone, and on the van's own dashboard screen.

HARDWARE, APPROX.

THE SAME CONTROLS, WHEREVER YOU ARE

IN THE CABIN

4" TOUCH DISPLAY

Clock, weather, battery and every control a tap away. Shuts itself down on battery and wakes when plugged in.

The 4" cabin display.

IN YOUR POCKET

IPHONE & ANDROID

Works in Safari or Chrome on any phone, tablet or laptop on the van's Wi-Fi. Nothing to install. Android also has its own app.

ON THE DASHBOARD

VAN HEAD UNIT

Runs on the factory screen through a CarPlay / Android Auto dongle, with an Android Auto view for driving.

On the van's own screen.

IN YOUR SMART HOME

HOME ASSISTANT

The hub's open API lets Home Assistant read the battery, chargers and heater over your own network.

On a phone.

THE HUB

INDUSTRIAL RELAY BOARD, VAN-SIZED BRAIN

CamperDash runs on a Waveshare RP2350-Relay-6CH-W: a DIN-rail relay controller with Wi-Fi and Bluetooth, powered straight from the 12 V system (7–36 V input).

- Six relays switch pumps, lights, fridge, inverter or anything on 12 V
- Talks Bluetooth to the battery, chargers and heater, with no extra wiring
- Runs its own Wi-Fi hotspot, so it works with no phone signal
- On-board buzzer and RGB light for alarms; RS485 for future devices
- GPS for location, time and weather; accelerometer for levelling
- Updates the cabin display over the air, with automatic rollback

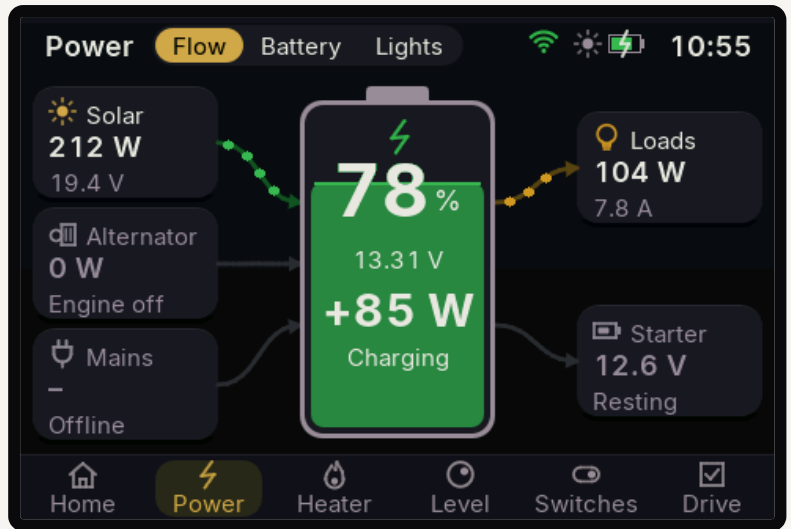

POWER

SEE WHERE EVERY WATT IS GOING

A live flow diagram shows solar, alternator and mains charging into the leisure battery, and the loads drawing from it. The dots move with the current.

- State of charge, voltage and current
- Solar, alternator (DC-DC) and hook-up charger side by side
- Starter battery voltage
- Battery cell detail and a day's history
- Low-battery and fault alerts on every screen

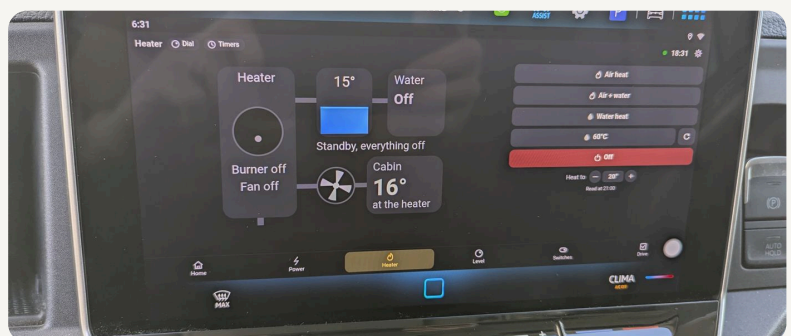

Power flow on the van's dashboard screen.

HEATING

WARM VAN, HOT WATER, ON A TIMER

Full control of the diesel combi heater, with its own status, fan speed and faults shown live.

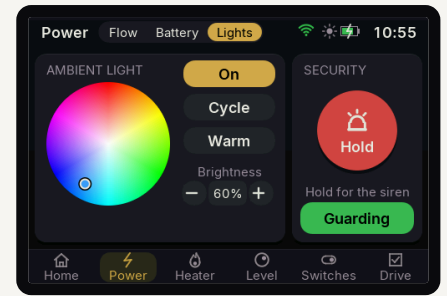

- Air heat, water heat, or both
- Set the cabin temperature; 40 °C, 60 °C or boost hot water
- Heater timers and a warm-up before your alarm
- Auto heat to protect the van from frost
- Timers to have it warm when you're up

Heater control on the dashboard screen.

SIX CIRCUITS, YOUR NAMES, YOUR ICONS

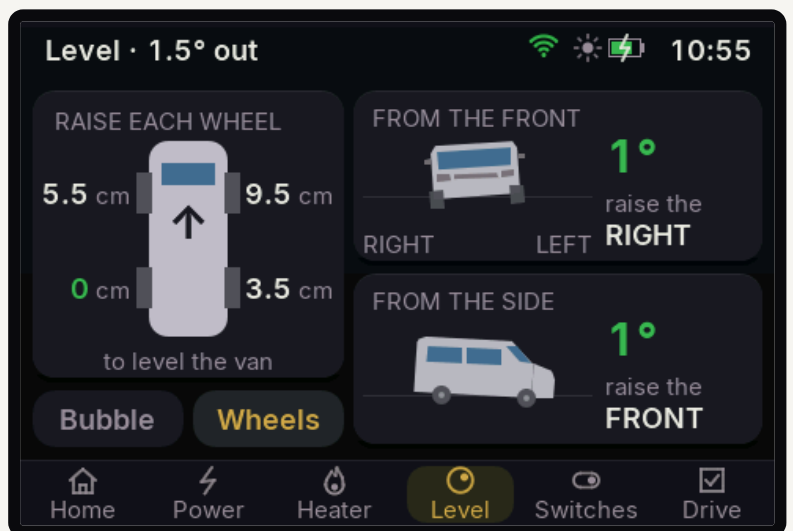

- Water pump, fridge, lights, inverter, fuel pump, or whatever you wire
- Relay number shown in Settings for easy wiring
- Switch from any screen in the van
- Ambient lighting colour, cycle and brightness

LEVELLING AND DRIVING

**LEVEL FIRST TIME.
LEAVE NOTHING
BEHIND.**

- Bubble view and per-wheel ramp heights
- Mount the sensor any way round; set its orientation in Settings
- Pre-drive checklist before you pull away

CAMPERLUX CAMPERDASH

TANKS

WATER AT A GLANCE

Fresh and grey water shown as levels you can read from across the van, with a warning before either becomes a problem. Works with a tank sensor wired to the hub.

- Fresh water: "Getting low" below 35%, "Refill now" below 15%
- Grey water: "Empty soon" above 65%, "Empty now" above 85%
- On every screen in the van

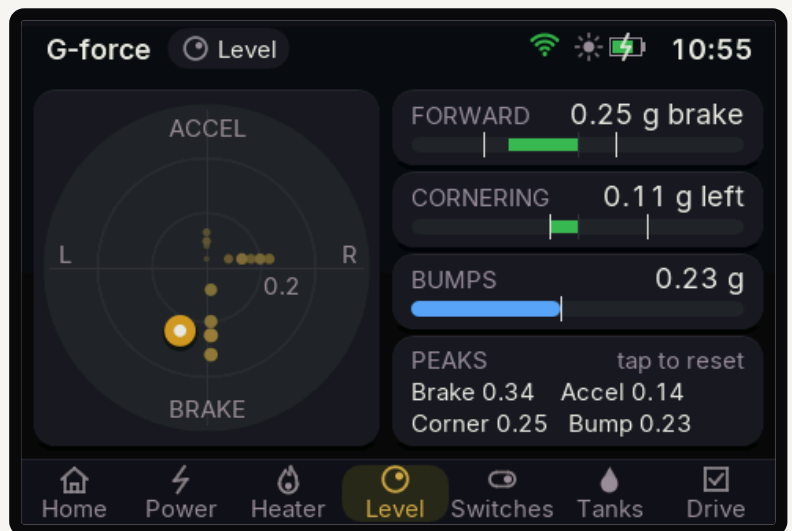

G-FORCE

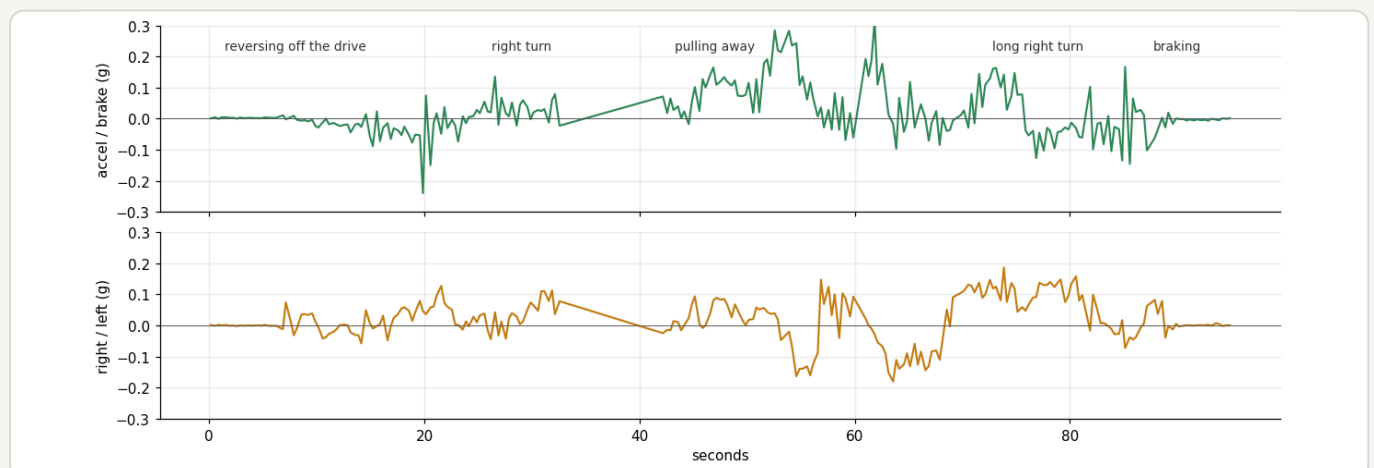

HOW THE VAN DRIVES

A view on the Level page for the road: a g-ball that moves like a marble in a bowl, and bars for accelerating and braking, cornering and bumps, each with its peak.

- From the same sensor and calibration as the levelling
- The hub records the last 15 minutes of driving, even out of Wi-Fi range, to look at afterwards
- The screen stays awake on it while you drive

A REAL DRIVE ROUND THE BLOCK

Recorded by the hub: reversing off the drive, three right turns, braking back onto the drive. Gentle driving peaks at about 0.25 g.

WORKS WITH THE KIT ALREADY IN YOUR VAN

CamperDash connects over Bluetooth, so nothing needs rewiring. Supported today:

LEISURE BATTERY

FOGSTAR

Lithium battery BMS: charge, voltage, current and cell detail.

ALTERNATOR CHARGING

RENOGY

DC-DC charger: alternator and solar input, charge stage and output.

HOOK-UP

VICTRON

Blue Smart IP22 mains charger, read from its Instant Readout broadcast.

HEATING

JP HEATER

JP diesel combi heater (air and water): full control, timers and fault codes.

NEED SOMETHING ELSE?

Other heaters, batteries, solar controllers and sensors can be added. New integrations are written against the CamperDash source code using Claude Code, so adding a device means getting hold of the code and building the integration for it. The RS485 port and spare inputs leave room for wired devices too.

EVERYTHING ELSE IT DOES

SMALL TOUCHES THAT MAKE VAN LIFE EASIER

WEATHER & LOCATION

- **GPS** sets the clock and forecast location
- Place name and a **map** of where you are
- 12-hour and 3-day forecast, rain and frost warnings

SECURITY & ALERTS

- **Guard mode** alarm when the van is left
- Hold-to-sound **panic** siren
- Buzzer, RGB light and on-screen alarms
- Password and device pairing

AROUND THE CLOCK

- **Alarm clock** with heater warm-up
- **Kitchen timer**
- Night mode, auto dimming, screen off
- Storage mode for winter lay-up

THE DISPLAY

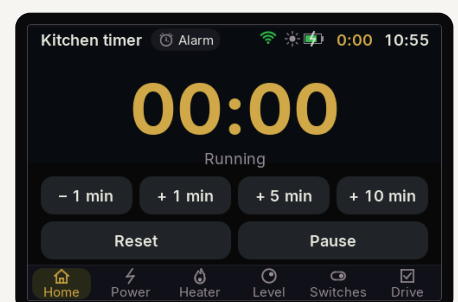

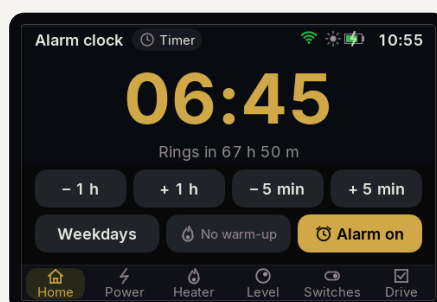

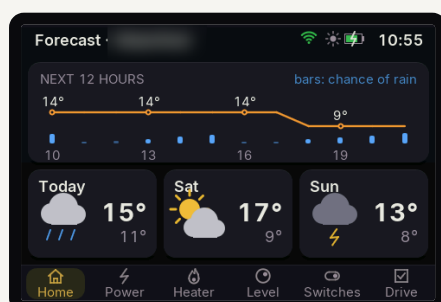

- Shuts down on battery, **wakes on charge**
- Status LED
- **Over-the-air updates** with automatic rollback

PHONES & TABLETS

- **iPhone and iPad** through Safari, no app needed
- Add to Home Screen for full-screen use
- Android app downloads from the hub and updates itself
- **Android Auto** view for the road

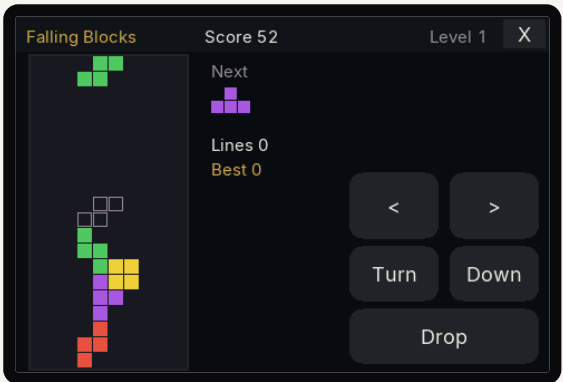

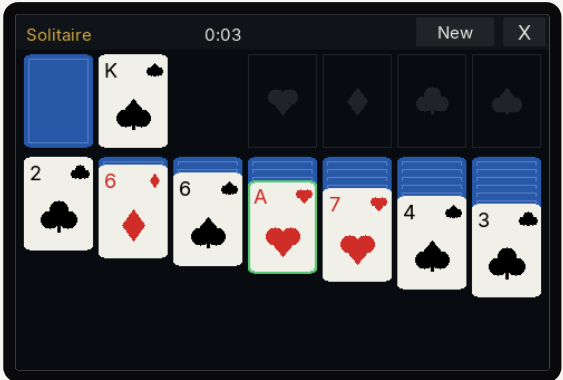

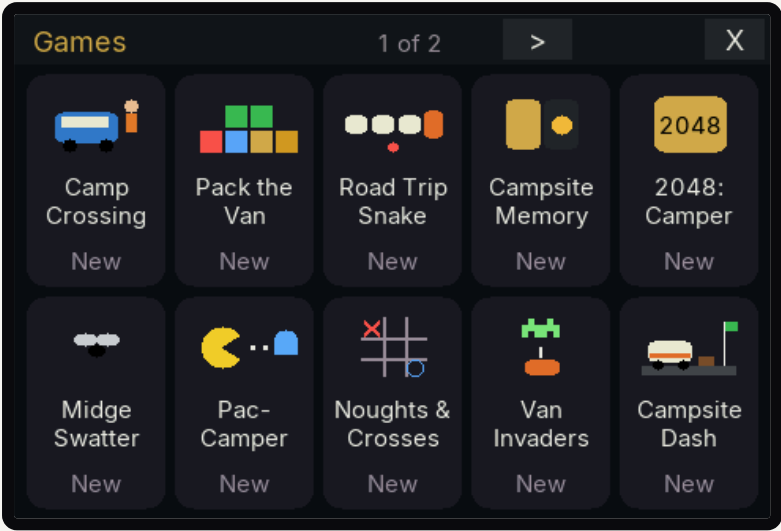

OPEN

- A documented **HTTP API** on the van's network
- Home Assistant and scripts welcome
- Works fully offline in the van

TWENTY GAMES ON THE CABIN DISPLAY

Tap the Camperlux logo for the games: classics, van-themed originals, two-player games for the table, and board games against the display.

ARCADE	Camp Crossing · Pack the Van · Road Trip Snake · Midge Swatter · Pac-Camper · Van Invaders · Campsite Dash · Breakout · Falling Blocks
TWO-PLAYER	Pong · Noughts & Crosses · Four in a Row
PUZZLE	Campsite Memory · 2048 · Minesweeper · Sudoku · Solitaire
BOARD	Chess · Draughts · Reversi

WHAT IT COSTS

HARDWARE FOR AROUND £85

Off-the-shelf parts at approximate prices. Cables, enclosure and fixings are extra. The phone, tablet and dashboard views use devices you already have.

Hub · Waveshare RP2350-Relay-6CH-W 6 relays, Wi-Fi, Bluetooth, buzzer, RGB, RS485, 7–36 V	£40
Cabin display · 4" ESP32-S3 touch screen Touch panel, Wi-Fi, battery-backed	~£30
GPS module Location, time and weather position	~£10
Accelerometer Levelling and guard mode	~£5

Total ~£85

BUILT IN A VAN, FOR A VAN

Designed and tested in a working camper. It runs entirely inside the van, with no subscription and no cloud needed, and uses the internet only for the weather forecast and the clock.
